DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 1 requires that each cutting line be concave with respect to a straight line between the first and second ends of the respective cutting line being about 14% of the length of the straight line. However, this structural limitation, specifically this ratio of 14%, was not included in the original set of claims, instead it was added in the amendment filed 6 February 2006. Additionally, the ratio was not included in the originally filed Specification and was instead added in the amendment of 6 February 2006. Therefore, the ratio constitutes New Matter. As to the drawings, the examiner refers the applicant to case law *Hockerson-Halberstadt, Inc. v. Avia Group Int'l*, 222 F.3d 951, 956, 55 USPQ2d 1487, 1491 (Fed. Cir. 2000). Specifically, the

Art Unit: 3671

case concluded that it is well established that patent drawings do not define the precise proportions of the elements and may not be relied on to show particular sizes if the specification is completely silent on the issue. In this instant case, the applicant was silent on the issue of dimensions of the drawings and therefore any arguments based on measurement of the drawing features are of little value. See MPEP 2125 Drawings as Prior Art, Proportions of Features in a Drawing are not Evidence of Actual Proportions When Drawings are not to Scale.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Poget FR 2595190 A1 in view of Isbell 4,380,889.

Poget discloses a knife section comprising:

- A flat top and bottom surface
- A base edge
- A leading end opposite the base edge
- A left side including
 - An edge extending from the base edge to about one half of a distance between the base edge and leading end

Art Unit: 3671

- An arcuate left cutting edge extending between the left side edge and the leading end
- A right side including
 - An edge extending from the base edge to about one half of a distance between the base edge and leading end
 - An arcuate right cutting edge extending between the left side edge and the leading end
- Wherein a distance between the left cutting edge and the right cutting edge continually increases from the leading end to the left and right side edges
- Wherein the arcuate cutting edges define portions of a substantially elliptical cutting edge when a left side edge of one knife section is positioned substantially adjacent to a right side edge of another knife edge.

However, Poget fails to disclose serrated cutting edges.

Isbell discloses a similar knife section wherein the cutter blades are sharp and serrated to produce a highly effective scissors or shearing action (see column 1, lines 54-56).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the serrations as taught by Isbell on the knife sections of Poget in order to produce an efficient scissor action.

Response to Arguments

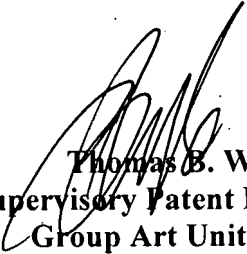

Applicant's arguments with respect to claims 1, 2, 4, 5 and 16 have been considered but are moot in view of the new ground(s) of rejection.
